# TALKING TRASH

## WAYS WE'RE RIDDING SANTA MONICA BAY'S BEACHES OF TRASH

### When:

Tuesday, February 4, 2025  
6:00 PM - 7:00 PM

### Where:

Manhattan Beach Library  
1320 Highland Ave, Manhattan Beach, CA

### Join us for an informative and engaging evening with Dr. John H. Dorsey,

Professor Emeritus from Loyola Marymount University, John is an ocean conservation expert and avid surfer and ocean lover. Before LMU, he worked as a marine biologist for the City of Los Angeles, focusing on marine monitoring in Santa Monica Bay and stormwater management.

### Why should you attend?

Because the future of our beaches—and the creatures that call them home—depends on all of us. If you love the ocean, want cleaner beaches, and want to make a real impact, this talk is for YOU.

### You'll learn:

- How trash impacts the health of Santa Monica Bay's beaches, ocean, and marine life
- Efforts being made to combat pollution and clean up our coastlines, including the Trash Interceptor 007 moored at the mouth of Ballona Creek, the only device of its kind in the U.S.
- Simple, actionable steps we can all take to reduce trash and keep our beaches pristine

**Presented by the OTS Coastal Bottlenose Dolphin Project**

Free Event | No Registration Required
